DETAILED ACTION

Drawings

1. Figs. 6-8 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g).
2. The drawings are objected to as failing to comply with 37 CFR 1.84(p)(5) because they do not include the following reference sign(s) mentioned in the description: I31a, I32a, I31b, and I32b. See page 9, line 2. Correction is required.
3. The drawings are objected to as failing to comply with 37 CFR 1.84(p)(4) because reference character "1" has been used to designate both "gate" and "source diffusion region". See page 7, line 1 and page 8, line 1. Correction is required.

Claim Objections

4. Claim 1 is objected to because of the following informalities: on line 8, the word "drains" should be "drain". Appropriate correction is required.

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

Art Unit: 2815

6. Claims 1 thru 3 are rejected under 35 U.S.C. 102(e) as being anticipated by Hansch et al. '741 B1. Hansch discloses (see, for example, FIG. 5 and FIG. 3A-3B) a semiconductor device comprising test devices 502-524 wherein each test device comprises a source, drain, gate line and a pair of dummy gate lines.

Claim Rejections - 35 USC § 103

7. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

8. Claims 4 thru 12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hansch et al. '741 B1 as applied to claims 1 thru 3 above, and further in view of Ham '595. Regarding claim 4, Hansch does not disclose said first and second gate being respectively three forked. However Ham shows (see, for example, FIG. 1) a NMOS transistor having a ladder structure where several gate branches G extend from a main line of a gate pattern 1. It was well in the art at the time of invention to implement this ladder structure so that one could accommodate a greater number of transistors in a minimum amount of space. Therefore it would have been obvious to one of ordinary skill in the art at the time of invention to use a ladder structure of Ham in Hansch for the reason cited above.

Regarding claims 5-12, Hansch does not disclose electrodes or contact holes. However, it was well known in the art at the time of invention to include electrodes above diffusion regions (i.e. source, drain) and contact holes therein in order to apply a predetermined voltage. Therefore

Art Unit: 2815

it would have been obvious to one of ordinary skill in the art at the time of invention to include the electrodes and contact holes of Ham into Hansch's invention in order to apply voltages to the source and drain.
